Beyond Fourier's Law ... a dispersion relation perspective

Temperature waves: graphite and correlated materials

Temperonic Crystal

Beyond Fourier's Law

$$q(x, t) = -k_T \nabla T(x, t) \quad \xrightarrow{\hspace{1cm}} \quad \text{no causality}$$

Dual-Phase-Lag-Model

$$q(x, t + \tau_q) = -k_T \nabla T(x, t + \tau_T)$$

+ conservation of energy

$$\left(\frac{\tau_q}{\alpha}\right) \frac{\partial^2 T}{\partial t^2} - \frac{\partial^2 T}{\partial x^2} + \frac{1}{\alpha} \frac{\partial T}{\partial t} - \tau_T \frac{\partial^3 T}{\partial x^2 \partial t} = 0$$

Beyond Fourier's Law

$$q(x, t) = -k_T \nabla T(x, t) \quad \rightarrow \quad \text{no causality}$$

Dual-Phase-Lag-Model

$$q(x, t + \tau_q) = -k_T \nabla T(x, t + \tau_T)$$

↓
+ conservation of energy

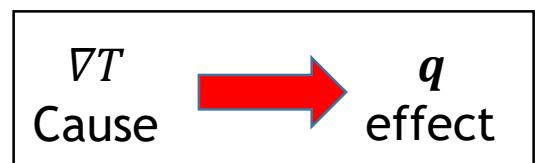

$$\left(\frac{\tau_q}{\alpha}\right) \frac{\partial^2 T}{\partial t^2} - \frac{\partial^2 T}{\partial x^2} + \frac{1}{\alpha} \frac{\partial T}{\partial t} - \tau_T \frac{\partial^3 T}{\partial x^2 \partial t} = 0$$

Waves

Diffusion
damping

Damping

$$\tau_q > \tau_T$$

Beyond Fourier's Law

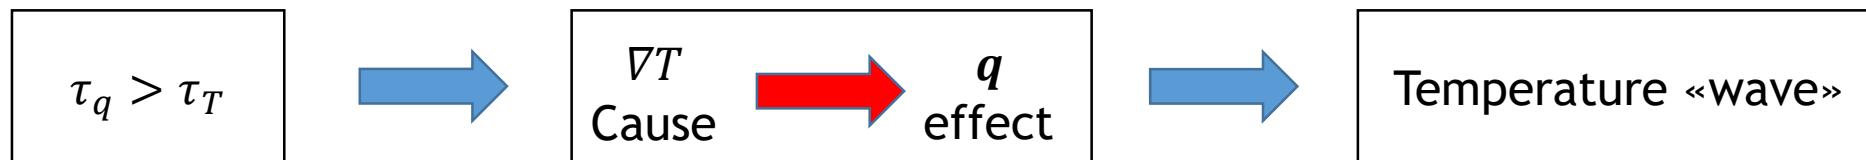

$$q(x, t) = -k_T \nabla T(x, t) \quad \rightarrow \quad \text{no causality}$$

Dual-Phase-Lag-Model

$$q(x, t + \tau_q) = -k_T \nabla T(x, t + \tau_T)$$

$$\left(\frac{\tau_q}{\alpha}\right) \frac{\partial^2 T}{\partial t^2} - \frac{\partial^2 T}{\partial x^2} + \frac{1}{\alpha} \frac{\partial T}{\partial t} - \tau_T \frac{\partial^3 T}{\partial x^2 \partial t} = 0$$

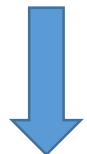

$$q(x, t) = -k_T \nabla T(x, t)$$

no causality

Dual-Phase-Lag-Model

$$q(x, t + \tau_q) = -k_T \nabla T(x, t + \tau_T)$$

+ conservation of energy

$$\left(\frac{\tau_q}{\alpha}\right) \frac{\partial^2 T}{\partial t^2} - \frac{\partial^2 T}{\partial x^2} + \frac{1}{\alpha} \frac{\partial T}{\partial t} - \tau_T \frac{\partial^3 T}{\partial x^2 \partial t} = 0$$

Frequency ω

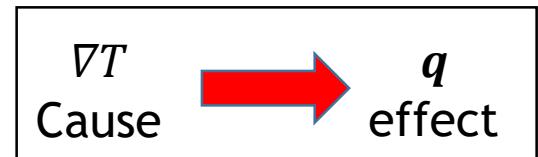

Wave vector k

Dispersion relation:

$$(1 + i\omega\tau_T)k^2 = \left(\frac{\tau_q}{\alpha}\right) \left(1 - \frac{i}{\omega\tau_q}\right) \omega^2$$

Q-factor

$$\tau_q > \tau_T$$

Thermal dynamics and electronic temperature waves in layered correlated materials

Giacomo Mazza Marco Gandolfi, Massimo Capone, Francesco Banfi & Claudio Giannetti

Hubbard Model

$$H = \sum_{n=1}^L h_n + \sum_{n=1}^{L-1} \tau_{n,n+1}$$

$$h_n = \sum_{\langle i,j \rangle \sigma} t_{\parallel} c_{in\sigma}^{\dagger} c_{jn\sigma} + U \sum_i n_{in\uparrow} n_{in\downarrow}$$

$$\tau_{n,n+1} = \sum_{\sigma} t_{\perp} c_{in\sigma}^{\dagger} c_{in+1\sigma} + h.c.$$

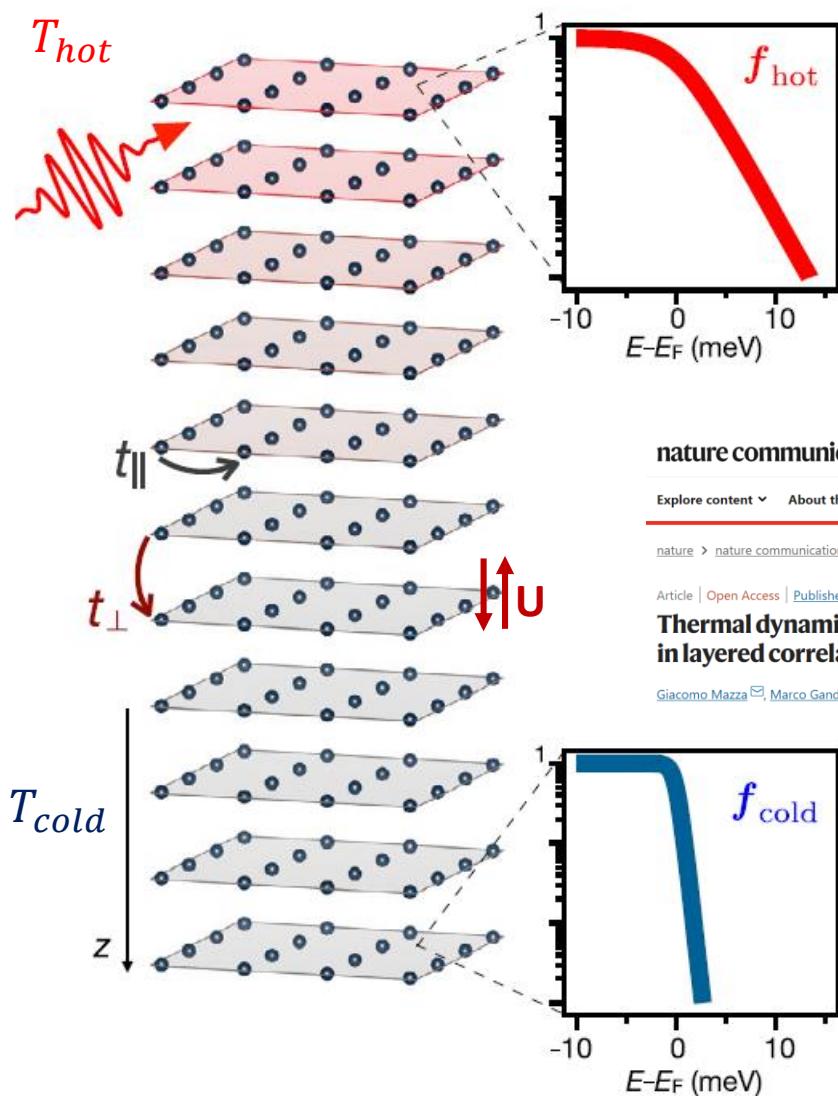

t_{\parallel} interlayer hopping

t_{\perp} intra-layer hopping

U Coulomb interaction

G. Mazza et al., *Nat. Comm.* (2021)

Layered Correlated Materials

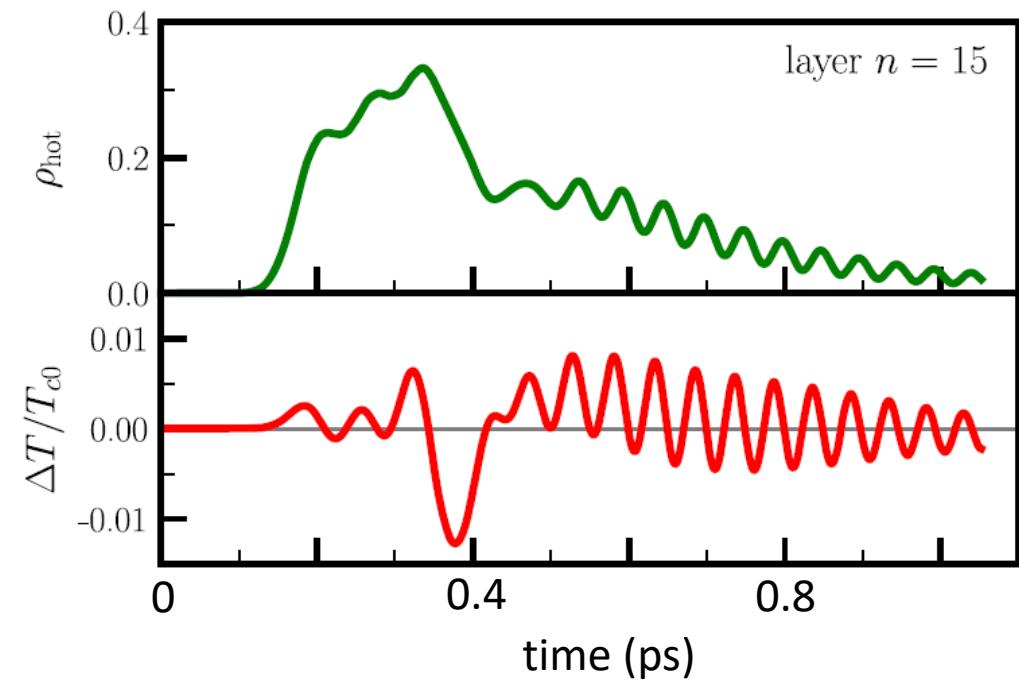

$$N_n^{neq}(\varepsilon, t) = f_{hot}\rho_{hot} + f_{cold}(1 - \rho_{hot})$$

$$f_{hot} = \frac{1}{\exp\left(\frac{\varepsilon}{k_B T_{hot}}\right) + 1}$$

$$f_{cold} = \frac{1}{\exp\left(\frac{\varepsilon}{k_B T_{cold}(n, t)}\right) + 1}$$

Thermal dynamics and electronic temperature waves in layered correlated materials
Giacomo Mazza Marco Gandolfi, Massimo Capone, Francesco Banfi & Claudio Giannetti

Energy density $E_n(t)$

Heat flux $\frac{\partial q_n}{\partial z} + \frac{\partial E_n}{\partial t} = 0$

Heat diffusion regimes

- **Ballistic:** large heat flux, no temperature dynamics
- **Hydrodynamic:** positive heat flux, temperature oscillations
- **Fourier:** $q \propto -\nabla T$

Delay times for correlated materials

For SrVO_3

$\tau_T \sim 5 \text{ fs}$ (scattering time from optics)

$\tau_q \sim 500 \text{ fs}$ (from neq. dynamics)

$k = 10 - 20 \text{ W m}^{-1} \text{ K}^{-1}$
